Hardback

Category: Pathology,
Ophthalmology

Readership:

Trainee and practicing
Pathologists and Ophthalmic
Surgeons

BIC Code: M MMF MJQ

This book features a biomicroscopic approach to the diagnosis of ophthalmic lesions. It provides practical guidance to diagnostic ophthalmic pathology and enables readers to understand salient histopathologic diagnostic features and clinicopathologic correlations

Key Points

- Contains latest developments covering both common and rare diseases affecting the eye and ocular adnexa. Chapters describe clinical features followed by description of histopathologic changes of the lesions occurring in the eyelid, conjunctiva, cornea, lens, uvea, retina, and orbital tissue
- Provides outstanding illustrations on normal histology, special stains and immunohistochemical findings including a brief outline on prognosis
- Includes general principles used in sectioning of ophthalmic specimens based on anatomy, clinical findings and macroscopic pathologic changes
- Unique chapter on ophthalmic changes seen in AIDS patients

Table of Contents

Part I

1. Introduction
2. Pathology of the eyelid
3. Pathology of the conjunctiva
4. Pathology of the cornea
5. Pathology of the lens
6. Pathology of the uvea
7. Intraocular Tumors

Part II

8. Diseases of the Retina
9. Coats' Disease
10. Diseases of the Vitreous
11. Pathology of the Orbit

Part III

12. Cytopathology of the Eye
13. Frozen Section
14. Ocular pathology in AIDS
15. Telepathology
